

Energy-efficient renovations with the PRO+ facade system can be supported through various funding programs from the federal and state governments. The combination of an energy-efficient building envelope, recyclable materials, and integrated photovoltaics makes PRO+ particularly eligible for funding.

Federal Funding for Efficient Buildings (BEG)

The BEG funding (BAFA / KfW) supports energy-related measures on the building envelope. This includes ventilated cladding facades (VHF) with thermal insulation and building-integrated photovoltaics. With PRO+, these requirements can be optimally met.

- Responsible: BAFA / KfW
- Eligible for funding: Planning, materials, and installation of energy-efficient facade systems
- More information: www.bafa.de / www.kfw.de

Promotion of Serial Renovation (BEG EM §35c)

This program supports serial renovations with prefabricated elements – ideal for the PRO+ system. Funding is provided for facade elements, installation, and planning services. The funding rate can be further increased through the use of PV modules.

State programs

Some federal states, including Baden-Württemberg (L-Bank) and Bavaria, offer additional funding for energy-efficient renovations and innovative facade technology. These programs can be combined with the BEG.
